“New graphic user interface unveiled!”

Here's to your business success!

nangu.^{TV} system is going to present its latest features and concepts during IPVT Forum in Prague (21 and 22 October). For the first time, we will publicly demonstrate the most recent graphic user interface on set top box, which brings the major improvements in the following areas:

- reactivity of the GUI (lightning fast!)
- clear new design to furthermore improve interface usability
- newly designed graphics elements, icon based
- readiness for future remote controls (G-Sensor RC ready)
- graphic features adoption according to the STB performance
- how industry well known techniques and standards are used in order to avoid usage of SVG

API for applications developed by 3rd parties or by customers itself

Do not miss out the opportunity to see nangu.^{TV} new interface and features personally at exhibition area, stand No.12. We are looking forward to see you there.

nangu.^{TV} is solution for small and medium sized operators who want to compete even to the biggest solutions operated mostly by incumbents and largest cable companies, including services requiring streaming video components like Pause TV, Start over TV, Timeshift TV and nPVR.
